One-Button and No-Button Conversion of Web Pages to PDF Files

Baltsoft Software has enhanced Web2PDF Converter - <http://www.web2pdfconvert.com/> - an online conversion site that lets you easily convert any web page to a PDF document, at no cost.

Simply visit the Web2PDF website, paste the URL of the web page to be converted, and click the "convert to PDF" button. In just a few seconds, the software converts the web page into a PDF document that you can download and use immediately.

With the latest version of Web2PDF Converter, it's easy to convert web pages to PDF files by email. Simply send an email to submit@web2pdfconvert.com with the web page URL in the subject line, and receive your PDF in less than a minute.

Baltsoft Software also lets you add a button to your browser. Click the "save page as PDF" button and Web2PDF Converter creates a PDF file of the current web page, without having to visit the Web2PDF Converter website. The button works in all popular Windows browsers, including Internet Explorer, Firefox, Google Chrome, Safari, and Opera.

Web2PDF offers an additional button that all website owners and bloggers are invited to add to their websites. With this "save page as PDF" button, website visitors can create and download a permanent PDF version of the current web page. Business people can use these buttons to encourage prospects to save catalog pages, order forms, and whitepapers.

Bloggers can make it easy for visitors to capture and save their postings in PDF format, all with a single button click. Website owners can even visit the Web2PDF statistics page to examine the conversion statistics from their website. As with all of the Web2PDF Converter services, the "save page as PDF" button is free of charge.

With Web2PDF Converter, there's no need to purchase expensive PDF conversion software, or spend days learning to run a complicated desktop PDF conversion application. The Web2PDF converted files are standard PDF files that can be read using Adobe's free Acrobat Reader, or any software that supports the popular cross-platform PDF format.

Business users can use Web2PDF Converter to make permanent records of competitors' web pages, capture breaking stories from online news sites, and download and share research information with colleagues. They can also use the "save page as PDF" buttons to add value to their website or blog, and make prospects' and customers' visits more interactive and rewarding. Home users will enjoy being able to create permanent PDF files of family sites, blogs, and sports stories.
